Z-Lid™ Expansion Top

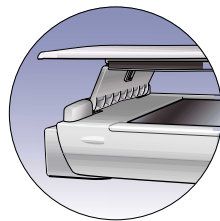

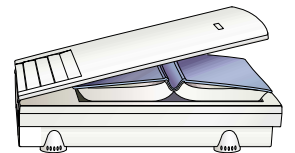

TECHNOLOGY BRIEF

The Z-Lid Expansion Top: A Product of Canon Know How.

Some of the world's greatest technology advancements have been the result of Canon Know How—exclusive innovations and proprietary technologies that empower consumers to do things faster and easier while maintaining the highest quality. Canon's new Z-Lid Expansion Top is a unique, built-in solution for flatbed scanners and the latest in this long tradition of Canon advancements. It will change the way consumers scan many large or bulky items.

A Major Advancement in Scanning Convenience and Usability.

Most scanner covers feature standard hinges that lift only at an angle. When scanning anything that isn't completely flat, the cover often becomes uneven and awkward. To address this problem, some scanners feature stationary posts instead of hinges. While the posts enable you to manually adjust height, the process is often clumsy and can result in the posts completely detaching from their postholes.

In contrast, Canon scanners designed with the Z-Lid Expansion Top adjust for bulky items automatically. The scanner's cover features a spring-loaded, z-shaped hinge. When the cover closes on top of a bulky item, such as a magazine or book, the hinge automatically lifts up to one inch high to create the space needed for the item while still keeping the cover flat.

The Benefits Are Clear.

Clearly, the Z-Lid Expansion Top takes scanning to the next level. It's a long overdue feature that speaks to the everyday challenge of scanning various bulky items. Not only does it make scanning easier and more convenient, but it improves scanning accuracy and focus by keeping the item flatter on the scanning surface. The spring-loaded mechanism helps keep the item in place and enhances operational stability.

The Z-Lid Expansion Top lifts to accommodate bulky items.
